The 30-day SEO plan

One task a day, 15 to 30 minutes, for a month. It starts with the pages Google already almost ranks, then AI answers, then links, and ends with what to measure. Same plan is in the free SEO tracker (sheet "30 days") with a Done column. Checked November 2026. Nobody can promise rankings: these are the habits that give a site its best shot.

Week 1: quick wins and switches

When	Task	Free help
Day 1	Search Console › Performance › Search results › turn on Average position › Queries › Position greater than 7 › sort by Impressions. Copy the top 10 into the tracker.	page-2 quick wins guide
Day 2	Fix shortlist page 1: answer first, add what the top 5 don't have, link to it from 2–3 related pages. Request indexing once.	ranking-principles skill
Day 3	AI switches: robots.txt lets in the AI search crawlers (OAI-SearchBot, PerplexityBot, Claude-SearchBot, Googlebot, Bingbot); check your host or Cloudflare's AI bot setting; add the site to Bing Webmaster Tools.	AI search visibility checklist
Day 4	Write the 5 exact questions your best buyer would type. Ask ChatGPT, Perplexity and Google AI Mode. Log who gets named, and why, in the tracker's AI answers log.	10-minute AI ranking setup
Day 5	Save your humanizer prompt, with 3 samples of your own writing, in ChatGPT's Custom instructions or Claude's Instructions.	ai-humanizer skill
Days 6–7	Fix shortlist pages 2 and 3.	

Week 2: pages that answer the exact question

When	Task	Free help
Days 8–10	Write one new page that answers your best exact question in its first 2 sentences, with something only you have: your prices, a real job, a test.	ranking-principles skill
Days 11–12	Fix shortlist pages 4 and 5. Request indexing for each, once.	
Days 13–14	Write a second new page. Link both from related pages with descriptive link text.	serp-to-published-article skill

Week 3: links and mentions

When	Task	Free help
Day 15	Search "your brand" -site:yourdomain.com. Find sites that mention you without a link and send 3 short, polite asks.	backlink-maxing skill
Days 16–17	Find 3 resource pages or "best of" lists in your niche where one of your pages truly fits. Pitch one.	50 backlink tactics

Days 18–19	Answer one real question on Reddit, LinkedIn or YouTube where those already rank for your search. Follow the community's rules.	borrowed-authority skill
Days 20–21	Check-on day for your first fixes: fill in "Position after" and "Clicks after" in the tracker.	

Week 4: measure and plan the next month

When	Task	Free help
Days 22–24	Search Console › Performance › Compare the last 28 days with the 28 before. Watch clicks first. Big site (over 500 pages)? Check the Page indexing report too.	
Days 25–26	Ask your 5 questions again in the same tools. Note what changed.	
Days 27–28	Pick next month's 5 pages: the shortlist rows that moved least, plus 2 new questions.	
Days 29–30	Write down what worked. Do more of it next month, and drop what didn't.	

What to measure (Google's own reports)

- **Performance report:** clicks, impressions, CTR and average position. Google: "Impressions and clicks are ultimately the measure of success for your site."
- **Page indexing report:** which pages Google indexed and why others weren't. Google says sites under 500 pages "probably don't need to use this report": spot-check key pages with URL Inspection instead.
- **Core Web Vitals report:** real-user speed and stability data (LCP, INP, CLS), mobile and desktop.
- **Manual actions and Security issues:** should both say no issues. Check them first if traffic falls off a cliff.

Comparing with last year? Google confirmed Search Console misreported impressions (and so CTR and average position) from May 13, 2025 to April 27, 2026. Clicks weren't affected, so compare clicks for those dates.

Be patient. Google says indexing a new page can take "a week or so", and to wait "a few weeks" before judging your work. After a core update, recovery "could take several months".
